DETAILED ACTION

1. Applicant's election of invention I (claims 1, 2, 8, 9, 11-14 and 33) in the reply filed on 04/20/2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 15-24 and 34-44 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 04/20/2007.
3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 1, 2, 8, 9, 11, 14 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakuma et al ('634).

Sakuma et al discloses a retardation element having an optical axis and consisting of an alkaline-earth metal fluoride crystal having a <110> crystal axis (see Table 3), wherein the optical axis of the crystal inherently points approximately in the direction of the <110> crystal axis of the crystal or a main crystal axis equivalent thereto in order to measure the birefringence of the crystal, wherein the alkaline-earth metal fluoride crystal is one of a calcium fluoride crystal and a barium fluoride crystal (see Table 3), wherein the retardation element inherently has an entry face for incident light and an exit face for exiting light, wherein at least one of the entry face and the exit face of the crystal obviously has a positive or negative power due to the

Art Unit: 2872

fact that Sakuma et al states that the crystal can take the form of a lens (see column 13, lines 25-30) and wherein said lens can be obviously employed in any optical system where lens would commonly be employed (see column 1, lines 11-18).

As to the limitations of 8, 9 and 11-13, it is well known to use lenses having the size, shape and thickness profile, as recited by applicant, in the same field of endeavor for the purpose of reducing aberrations.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the calcium fluoride crystal lens of Sakuma et al, to include the size, shape and thickness profile, as recited by applicant, in order to similarly reduce aberrations.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
